

# STS

## Stores Tracking Systems

*...software support has been prompt and reliable. The company uses a Team Concept to support software enhancement requests. This type of environment creates additional ideas regarding how to accomplish our goals." (Hutchinson Utilities, 2005)*

STS is an exceptionally easy-to-use inventory solution for the typical parts and repair centers used in many industry segments. It allows you to manage spare parts and components in a centralized warehouse or storeroom and maintain a highly accurate inventory to ensure that you have the parts available when you need them!

### Use STS to Track Your Consumables:

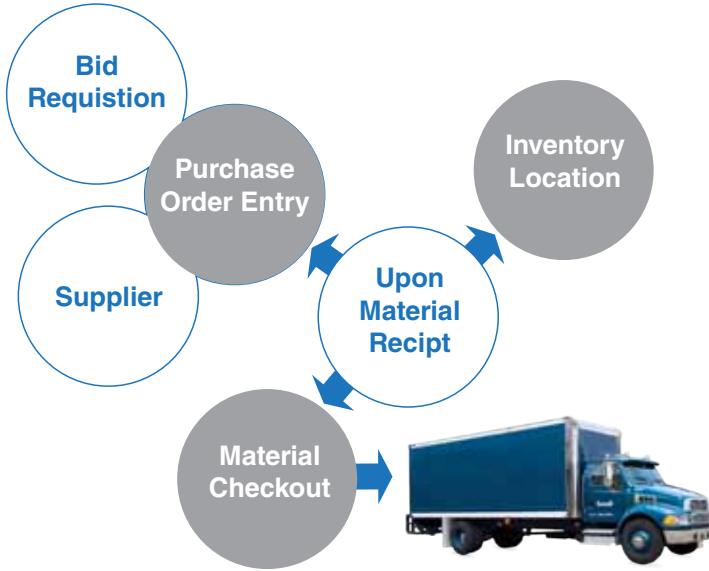

- Spare/Repair Parts
- Medical Supplies
- Office Supplies
- Cleaning Supplies
- Tooling and Inserts
- and more...

### STS Users:

- Municipal Utilities
- Service and Support Organizations
- Maintenance Repair Centers
- Medical Storage Rooms
- Manufacturers with Tooling Storage
- Schools and Universities
- Government Agencies
- and many others!

# Stores Tracking Systems **STS**

STS is designed on the same foundation as our IMS and WMS products for manufacturers and warehouses. It provides full inventory management of materials ordered and receipted into the system. Items can then be checked out of inventory by warehouse / storeroom personnel or by end user's in a "trusted" employee environment.

A "Profile" feature allows the checkout of a pre-assigned group of items when using the PC checkout function. Numerous reports let you monitor which employee is receiving materials. STS even allows you to perform a cycle or physical count of inventory.

Our STS includes a barcode label design feature right within the system. Design your own label formats for the user, location, and part. By adding a label printer, you can print them at your own convenience.

Handheld barcode scanning systems offer a high level of mobility and are available as a part of STS. Users can carry these lightweight yet industrial units to record all transactions throughout the day. Upon return to the office, all data is then downloaded back into STS. Let us work with you to select the right equipment for your needs.

STS Features	STS PRO
Receiving – Unplanned and Purchase Order Receipts	●
Bar Code Label Designer/Printing	●
Part Master	●
Vendor Master	●
Purchase Order Entry	●
Inventory by Facility Location	●
