

GigaTrak® Tool Tracking System

The GigaTrak® Tool Tracking System (TTS) is a powerful yet easy-to-use solution that streamlines the management of your Tools and Equipment. Reduce time searching for lost or misplaced Tools and gain a better understanding of where your assets are located at any given time. Now, with the TTS app, you can turn your device into a mobile barcode scanner and track on the go!

Every company has valuable tools and equipment assigned to employees and job sites every day. The question you need to ask yourself is “How much do I lose each year?” With the GigaTrak® Tool Tracking System (TTS) you will reduce losses by holding your employees responsible for the tools and equipment you give them, through a simple scan of a barcode.

- Control Change & Performance
- Internal Resource Utilization

GigaTrak® Tool Tracking System

GigaTrak® TTS helps you organize and track your tools and equipment inventory through a standardized check out/in process to an employee, location, container, or member (Contractor Edition Only). A detailed history is kept on every transaction to ensure that all of the information you need to run your business is readily available.

Our TTS allows you to setup a Master/Catalog listing of tools so that new tools can be added faster. You can also search on nearly any field including classification, type, description, model, and many others. You can keep track of lost and broken equipment while transferring between facilities. Equipment maintenance can also be managed with the Pro and Contractor Editions. TTS even has the ability to import data from other tool systems.
