

TTS

GigaTrakSM Tool Tracking System

GigaTrak. TTS is designed to offer an easy-to-use lower cost alternative to other tool solutions in the market today. Reduce losses and save time tracking your tools with the GigaTrak Tool Tracking System!

Quick to install

Easy to learn

Simple to use

Upgradable

Start with a basic package and easily upgrade as your requirements change.

Every contractor distributes valuable tools and equipment to employees that are assigned to a job site or a project, but, are they ever returned?... "How much do you lose each year?" The GigaTrakSM Tool Tracking Software (TTS) can reduce losses by holding employees and contractors accountable for the tools and equipment you give them. Each tool is tracked through a simple scan of the tool's barcode, even schedule maintenance and repairs! Locate tools quickly and provide employees a report of what remains in their possession. By managing your tool inventory, TTS could pay for itself in just months!

Use TTS to Track Your Equipment:

- Power and Hand Tools
- Welders and Industrial Equipment
- Precision Instruments
- Calibrated Equipment
- Radios, Cellular Phones & Computers.
- Design Drawings
- Consumables (gloves, etc.)
- You name it, TTS can track it!

TTS Users:

- Contractors (Electrical, HVAC, Plumbing, etc.)
- Manufacturer's Tool Rooms
- Utilities and Municipalities
- Maintenance Groups
- Field Service & Repair Companies
- Government Agencies
- Development & Research Companies
- And many others!

GigaTrakSM Tool Tracking System TTS

GigaTrakSM TTS helps you organize and track your tools and equipment inventory through a standardized check in/ out process, assigned to an employee, contractor, location, project or job site. Every transaction is captured to establish the history of each tool allowing you to make accurate and timely decisions.

GigaTrakSM TTS allows you to setup a master tool file allowing you to quickly add new tools. Easy search on nearly any field including description, model and serial number. Keep track of lost and broken equipment. Transfer equipment between facilities. Schedule maintenance for any type of tool/equipment item and TTS alerts you when maintenance or calibration is pending. Another key feature includes the ability to import tool data from other tool systems. All the features you typically need while keeping the system easy to implement and maintain! The GigaTrakSM product family allows you to easily upgrade from Basic to the Pro or Contractor edition. Start with Basic and upgrade at any time as your needs change!

GigaTrakSM TTS Offers

- Simple installation on any Windows XP, Vista, and Windows 7 computer system with typical memory and disk space.
- GigaTrakSM TTS is available as a bundle that includes the printer, labels & scanner, everything that you need in one box to get you started.
- GigaTrakSM TTS package runs on the Intermec CS40 Handheld Computer. The CS40 combines the performance and ruggedness into an economical form factor, offering a platform ideally suited to run GigaTrakSM TTS.
- Customization options available initially and at any time in the future to meet your specific requirements.
- Technical Support and Training options.
