

Asset Tracking System

Self-Hosted Edition

HOW MUCH DO YOU LOSE EVERY YEAR?

Every organization has business-critical assets, equipment, and consumable inventory items that need to be tracked. Tracking these items as they get moved around to a person or location can be a daunting task. Save time and money knowing where your assets are with a GigaTrak Barcode Tracking System. Our tracking system makes it easy to manage the location of each item with the simple scan of a barcode. Improve visibility, reduce unnecessary spending and prevent theft by digitizing your asset tracking. We offer a comprehensive solution designed for businesses, educational institutions, government offices, construction companies and many other industries.

Our user-friendly software helps increase location accuracy of internal assets by assigning them to a person or location. The system can be accessed via a PC or a mobile app available for Android and iOS devices. The GigaTrak Tracking System will pay for itself in just a few months by reducing downtime spent looking for missing assets. It is available in three versions: Asset Tracking Basic, Pro or School Edition. Contact our sales team to discuss the version that best fits your business.

WHY CHOOSE GIGATRAK?

Unlike other tracking Systems, GigaTrak allows you to enter, track and manage an unlimited number of assets and inventory items. This means that as your company grows, the system grows with you without having to pay per asset.

GigaTrak is a U.S. based, veteran owned company that focuses on creating a system that is easy to use at a cost-effective price. All purchases include an online recorded training session to ensure a successful implementation for your organization.

CLOUD-HOSTED SYSTEM

As an extension of our Asset Tracking System (ATS), GigaTrak Tool Tracking System (TTS) offers a variety of benefits in addition to our Asset Tracking solution. This includes a cloud-based option, multi-facility access levels, kit creation capabilities and much more. TTS also supports geotagging of transaction location and offers users a Tool Master feature for uniform data management. For details and recommendations on which system would best suit your needs, contact us for more information.
